I. Introduction

Article IX, Section 4 of the Fairwood Greens’ CC&Rs requires that each Homeowner maintain the exterior appearance of his/her property in a manner that upholds the quality of our neighborhood. These declarations are to protect every Homeowner’s property value by ensuring a well-kept and desirous place in which to live, which includes aesthetics involving after-construction equipment added to a Lot or a house.

The laudable goal of saving energy and incorporating equipment and systems into and on to homes or lots which do so has resulted in increased interest in the installation and use of solar energy devices and equipment. The Association does not want to do anything to prevent use of such devices, but feels it is important to ensure that such equipment is reasonably controlled as to appearance and location of installation, so as to protect neighbors and the community as a whole from unsightly equipment and/or installation. Accordingly, the purpose of these Rules about solar energy devices and equipment is to reasonably control use and location to protect home values and aesthetics in the community, without preventing their use.

II. POLICY

These rules, regulations and guidelines apply to all solar energy devices including without limitation solar panels and their associated components, solar tubes, solar skylights, wind turbines or other solar energy devices (collectively referred to in this Rule as “devices” or “systems” or “equipment”) which due to installation and use location are or may become “visible from neighboring property” above the fence line or other privacy barriers that may exist between neighboring yards and homes.

1. APPROVAL OF INSTALLATIONS

a.) Detailed plans for installation and placement of any solar panel / energy
device must be submitted to the Architectural Committee for review and receive
written approval from the Association prior to such installation.
b.) An illustrated brochure of the proposed system, which depicts the materials to be used, and drawings showing the location and number of collectors, the attachment to the roof structure, and the location of exterior system components, shall be submitted with the Architectural Request.

c.) A King County Permit may be required for the installation of such device and ancillary equipment. The Association strongly suggests to Owner that he/she use an installer which is a licensed solar equipment contractor with the appropriate contractor’s license. Owner is entirely and solely responsible for knowing what permits may be required, and obtaining any such permits before installation begins.

d.) Homeowners are urged to check with their home builder or insurance company prior to installation of devices for how such installation may impact their roof warranty or other aspects of their structure. Neither the Architectural Committee nor the HOA Board of Directors is liable to the property owners from roof damage or for effects to roof warranties. The Association and its Board has no expertise or special knowledge regarding such systems and therefore the Association’s approval for installation of any such device(s) or system is not a representation that the system chosen by an Owner is safe to use or is compatible with Owner’s roof or other structures on the Lot or the Lot involved, and Owner assumes and bears all risks regarding installation and use of such a system.

2. TYPES

a.) Only commercially or professionally made devices are allowed. “Home made” devices will not be permitted due to the safety and aesthetics aspects of such devices.
b.) Ground -mounted solar panels are permitted and are preferred.
c.) Roof-mounted or wall mounted solar panels are permitted so long as their installed location will not be seen from the street fronting the house. The Association realizes that for any houses located on corner lots where the back of the house or roof is visible from a side street, that installation of such devices on the back side roof may still be visible from the street abutting the side of Owner’s lot, and installation on the back roof side of the house under these circumstances will not be considered a violation of these Rules).

3. LOCATION / PLACEMENT

Ground-Mounted Solar Panels
a.) The equipment must be installed in the rear yard with no portion of the unit exceeding six feet in height from the ground below it. If it is visible from the street, then the equipment must be painted to match, or the color of the materials used
must match, the color of the home, fence line or surrounding landscape as
directed by the Architectural Committee.

b.) Ground-mounted solar collectors shall be within the setback lines in
accordance with King County Codes / HOA CC&R's and concealed from
neighbor's view to the extent reasonably possible.
c.) No ground mounted devices or their components should be affixed to a
block wall or wood fence.

**Roof-Mounted Solar Panels**

a.) Roof-mounted systems must be installed so that the panels are flush-
mounted and centered on the back side of house or a garage roof if sufficient
space is available, or if possible, the patio roof should be use / extended.

b.) If an alternative placement location is necessary in order for the energy
device to reasonably work as intended (so that any loss of efficiency or capability
is no more than 10%), the Architectural Committee must consider the ability of
the device to properly work regarding its location. If the location which would be
required under these Rules would result in the device losing 10% or more of its
efficiency or energy generating capability, then the Committee should approve
the Owner's preferred location if that location is truly necessary under the factors
set out in this subsection. Solar panels should be installed as far as possible to
the rear of the house or garage. The front slope of the roof of the house or
garage may not be used.

c.) Solar panels should be an integrated part of the roof design and mounted
directly to the roof deck or if mounted on or over the existing roof tile, should be
flush with the slope of the roof. Solar units must not break the roof ridgeline.

d.) Solar panels should be positioned as low as possible on the roof extending
wider rather than higher on the roof plane. The solar panels, piping or any
exposed part of the installation may not be higher than the roof peak.

e.) Visibility of devices and their components must be minimized from public view,
and may be required to be screened from neighboring property in a manner
approved by the Architectural Committee.

**4. CONSTRUCTION / FINISH**

a.) All roof mounted equipment, (excluding the face of the solar panels), must
match the color of the roof material. This includes wind turbines, solar skylights
and other equipment. Exposed surfaces such as any frame or supports for
panels but excluding the exposed collector panel face itself must be painted to
match, or the color of the materials used must match, the surface on which it is
mounted.
b.) All exterior plumbing lines shall be painted to match, or the color of the materials used must match, the color of adjacent roof material and walls. Aluminum trim, if used and visible, should be anodized or otherwise color treated to blend into the surroundings as much as possible.

5. MAINTENANCE

a.) Homeowners will ensure that all surfaces of such devices or equipment, whether painted or colored materials, are properly and timely maintained to prevent peeling and cracking of paint or loss of coloration or other deterioration to the point where the equipment becomes unsightly and/or incompatible with the aesthetic standards of the community.

III. Infractions

Once a violation has been reported and confirmed, the violating homeowner shall be notified in writing, and, if not corrected in a timely manner, fines may be imposed and assessed according to Section IV.

At the Board’s discretion, legal action may be taken against the violating homeowner at any point once a violation has been confirmed. Additional fines will continue to be imposed and accrue while the legal action is in process if the homeowner remains in violation of the this Rule or any other provisions of the Association’s governing documents.

The opportunity to appeal the Board’s decision is available under the Association’s Rules and Regulations on “Appeal Process”.

Any devices already installed prior to the adopted date of this policy are grandfathered-in; provided, however, that if the devices so grandfathered in are later replaced by another or newer device, the new device will be fully subject to compliance with this Rule.

IV. Fines

1) First Offense - $10/day

2) Second Offense - $25/day

3) Third and All Subsequent Offenses - $50/day. The Association will bill the violating Homeowner the applicable fines at such time and for such periods as the Association considers reasonable.

All fines imposed by the Association upon an owner which remain unpaid for 60 days shall automatically constitute a lien on the lot and all its improvements, and may be handled and foreclosed upon in the same fashion as if it were a lien for
unpaid assessments under the Association’s governing documents and the laws of the State of Washington. The Association may file a formal lien with the county in order to further protect its interests regarding the unpaid fine(s). The amount of the lien shall include interest, and all costs and expenses, including attorney fees, incurred by the Association in the imposition and collection of such unpaid fine(s).

V. Rule Enforceability

If any portion of this rule is determined to be legally unenforceable, it shall not negate the enforceability of the remaining portions of the rule.

Dated and adopted by the Board of Trustees this 24th of March, 2009.
